$\sqrt{2}\cos\left(t-\frac{\pi}{4}\right)$
$(1,1)$
(a,b)
$\cos t$
$\sin t$
$(-1,-1)$
$(1,-1)$
$-1\cos t + 1\sin t$
$1\cos t + 1\sin t$
$= \sqrt{2}\cos\left(t-\frac{3\pi}{4}\right)$
$= \sqrt{1^2+1^2}\cos\left(t-\frac{\pi}{4}\right)$
$\sqrt{a^2+b^2}\cos(t-\phi)$
$\phi = \tan^{-1}\left(\frac{b}{a}\right)$
$\phi = \tan^{-1}\left(\frac{b}{a}\right)$
$\tan^{-1}\left(\frac{1}{1}\right) = \frac{\pi}{4}$
$\tan^{-1}(1) = \frac{\pi}{4}$
